

CLEARWAVE WATER SOLUTIONS

FLOW

WATER SOFTENER COLLECTION

*The foundation of a refined home
begins with the water inside it.*

Hard water leaves stubborn spots on glassware, dulls laundry, dries out skin, and quietly degrades the lifespan of your water heater and luxury fixtures. The ClearWave FLOW is engineered to stop hard water at the source, utilizing a premium high cross-link cation resin and a high-density garnet filtration bed to deliver exceptionally soft, clear water throughout your entire home.

KEY ADVANTAGES

- **HIGH CROSS-LINK RESIN**
Premium resin resists chlorine degradation and outlasts standard 8% softeners.
- **GARNET FILTRATION BED**
High-density garnet layer ensures clear, sediment-free water delivery.
- **INTELLIGENT REGENERATION**
Smart metering conserves water and salt by regenerating only when needed.
- **LIFETIME PROTECTION**
Lifetime warranty on tank, valve head, media, and labor. No exceptions.

Engineered for Longevity.

The ClearWave FLOW is not a standard softener. Every internal component is selected for durability, efficiency, and performance. From the high cross-link resin that resists chlorine degradation to the garnet filtration bed that ensures clean delivery, the FLOW is built to protect your home for decades.

HOW IT WORKS

- 01

INTELLIGENT METERING
Water enters through the ClearWave intelligent control valve, which precisely tracks household usage and triggers regeneration only when necessary, conserving salt and water.
- 02

HIGH CROSS-LINK ION EXCHANGE
Hard water passes through the premium high cross-link cation resin bed. Calcium and magnesium ions are captured and replaced with soft sodium ions. The elevated cross-link percentage makes this resin significantly more resistant to chlorine breakdown than standard 8% resin, extending its service life considerably.
- 03

GARNET FILTRATION POLISH
Softened water flows through a high-density garnet filtration bed at the base of the tank, providing superior flow distribution and reducing fine particulates.
- 04

AUTOMATED BRINE REGENERATION
When the resin reaches capacity, the system automatically initiates a self-cleaning brine cycle to restore the media to peak performance with no manual intervention.

BENEFITS OF SOFT WATER

SPOT-FREE GLASSWARE
No mineral deposits on dishes or shower doors.

SOFTER SKIN AND HAIR
Soft water lathers more effectively and rinses cleaner.

APPLIANCE PROTECTION
Scale buildup eliminated, extending appliance lifespan.

UP TO 50% LESS SOAP
Soft water activates detergents more efficiently.

WHAT HARD WATER COSTS YOU

- Water Heater Lifespan**
Scale buildup forces heaters to work harder, reducing lifespan by up to 50%.
- Plumbing and Fixtures**
Mineral deposits clog pipes and corrode premium fixtures over time.
- Soap and Detergent Waste**
Hard water requires up to twice as much soap to achieve the same lather.
- Skin and Hair Damage**
Dissolved minerals strip natural oils, leaving skin dry and hair brittle.
